

Specification Sheet

Amphomag Neutraliser

Product Code: 12-1018

Product Features

Amphomag is a genius clean-up tool and chemistry lesson in one. A unique ability to neutralise acids and bases makes it invaluable in the event of a spill.

An innovative multi-range pH indicator simplifies spill response by showing when its work is complete.

Applied to the spill, Amphomag turns red for acids and blue for bases. Then, as the spill is neutralised, it changes to yellow or green. Neutralised material can typically be landfilled.

For instance, sulfuric acid is safely rendered to harmless Epsom Salt after neutralisation. (It's enough to make you wish you'd paid more attention in science!)

Features

- Neutralises acids and bases
- Absorbs liquids, controls odours, and neutralises gases
- Turns red for acids and blue for bases
- Neutralised spills result in Amphomag turning to yellow or green
- Neutralised material is landfill-safe

Specifications

- 1.5kg pottle
- Loose fill
