

# Specification Sheet

## Mercury Spill Kit

Product Code: 13-2008

### Product Features

Cleaning up mercury is a major step up in difficulty from herding cats. And significantly more dangerous.

The serious, mercury-specific tools in this kit allow mercury to be solidified and contained. And, after water activation, the amalgamated product is easy to scoop up and safely dispose of in the bag provided. (If we lost you along the way, don't worry, there are instructions included.) With PPE for responder protection. A must-have for anyone working with mercury.

Tip: Never use brooms to clean up mercury, this will only result in it being dispersed.

### Features

- Compact and easy to store
- With complete responder instructions
- Includes PPE
