

Specification Sheet

Formaldehyde Spill Kit

Product Code: 13-2012

Product Features

Sometimes used as an industrial fungicide, germicide, and disinfectant, and as a preservative in mortuaries and labs, formaldehyde is definitely not something anyone wants to mess with.

This specialist clean-up kit features the solidifier FSC-1 which reduces responder exposure to formaldehyde gas during a spill. The solidifier transforms formalin into a semi-solid mass which cools rapidly, minimising formaldehyde gas.

The kit includes PPE for responder protection, along with an instruction card.

Features

- Dedicated PPE gear for responder protection
- Instruction card supports correct use
