

Specification sheet

New Pig Overpack - 20L

Product Code: 03-1003

Benefits

As they used to say in school assemblies; there's always one that lets the side down. Leaking containers are that one.

Dealing with leaking hazardous waste or dangerous goods whether for disposal, transfer or containment demands a secure solution.

Made in polyethylene and designed to exacting standards, the New Pig Overpack is suitable for acids, corrosives or even damaged, contaminated parts. A twist down, half turn lid provides a good, solid barrier between the contents and staff, the workplace, and the environment.

Check out the full range of Overpack sizes to see which best suits your needs.

Meets US DOT and UN performance requirements.

Features
